6 : NETWORK SETTING

Users can download and install the "Tuya Smart" APP on Google Play or App Store, and follow the APP prompts to register for an account.

Note: As the APP version will be optimized on a regular basis,it shall be subject to the actual APP interface.

6.1 : MANUALLY ADD WI-FI DEVICES

Select a device type. On the page that appears, enter the password for connecting to the 2.4 GHz Wi-Fi network. The location permission must be granted to automatically find Wi-Fi networks.

a. Select "Add Device" >"Camera & Lock" > Lock (Wi-Fi).

b. Enter the correct WiFi name and WiFi password.

c. Follow the door lock menu to enter the network settings,click"confirm the indicator is blinking rapidly"

d. Select EZ Mode,Waiting for device addition.After   successful addition, Click "Done" to go to the details page

Note: If the above steps fail, you can choose to switch the network configuration mode in the App and follow the instructions on the App page.

After completing the network configuration, you can modify the name of the smart lock and select the room where it is located. Click "Finish" and then you may use the App function of the smart lock.
6.2 : THE MAIN FUNCTIONS OF THE APP

1. View and manage users and their associated passwords, keys, and cards.

2. Create and manage temporary passwords (unlocked for a specified period of time)

3. Normal door opening message remote notification。

4. After the coercion password/coercion fingerprint is unlocked, it can be remotely alerted (you need to set the coerced unlocking method in user management).

5. Doorbell alarm, you can check the date、time.

6. Pressing the doorbell can trigger the mobile phone APP video docking, which can realize the mobile phone APP remote real-time and lock video intercom

Notes: The following problems may cause the smart lock binding failure, please check to avoid such problems.
1. The router opens the anti-WIFI-squatter function, which may lead to the device cannot be connected normally, you can check whether the anti-WIFI-squatter function is opened, temporarily close it when the network is matched, and then restore the router settings after successful network configuration.
2. Dual-band router users, please ensure that the cell phone and smart lock is connected to the 2.4G band WiFi.
3. Due to the instability of the bridged network, it is recommended to connect non-bridged WiFi.
4. The smart lock does not support WAP/ WPA2 enterprise WiFi for now, please use other WiFi.
5. Android system phones need to open the GPS.
7 : RESTORE FACTORY

Press This Key to Restore Factory Defaults

When prompted to restore factory settings, confirm that please press the [#] key, and press the [*] key to cancel.

⚠ CAUTION

After the factory Settings are restored, all user data will be cleared. Exercise caution when performing this operation.
